

CHRISTOPHER REDDISH

Data & Analytics Engineering • Cloud Data Platforms • Pipeline Architecture • Client Delivery

Riverview, FL | ChristopherReddish@USF.edu | (813) 362-8252 | linkedin.com/in/christopher-reddish-192a402a5 | github.com/Cred1747 | chrisreddish.com

Data and analytics engineer who designs, builds, and delivers production data platforms for external clients. Architects cloud data warehouses and ETL/ELT pipelines processing 180M+ records, dimensional models and semantic layers, and AI-enabled analytics applications for municipal government clients including Portland, Chicago, and Seattle. Specializes in regulated, person-level operational and financial data handled under government privacy and data-governance requirements. Combines advanced SQL and cloud platform depth with 12 years of operations leadership and a record of turning loosely defined stakeholder questions into production-grade systems. Published researcher completing an M.S. in Data Intelligence (4.0 GPA).

TECHNICAL SKILLS

Data Engineering ETL/ELT pipeline development and orchestration, ingestion/transformation/validation, high-volume batch processing, automated data quality checks, data lineage, data governance
Cloud Platforms Cloud data warehouse architecture: Google Cloud Platform in production (BigQuery, Cloud Storage, Cloud Run); containerized deployment, Git/GitHub, CI/CD workflows
SQL & Databases Advanced SQL (CTEs, window functions, query optimization, performance tuning), Google BigQuery, SQL Server, database design
Data Modeling Dimensional modeling (star schema, fact/dimension design), curated analytics models, semantic layers, data warehousing, data architecture
AI & ML Conversational AI / natural-language analytics agents, NLP (BERT, sentence transformers), PyTorch, scikit-learn
BI & Visualization Custom React + Recharts analytics applications, Looker (LookML semantic modeling), Power BI, Excel (advanced), KPI development, self-service analytics
Languages SQL, Python, LookML, JavaScript, R, DAX (working knowledge), HTML/CSS
Professional Client-facing delivery, stakeholder requirements gathering, mentoring junior analysts, technical documentation, Agile/Scrum, regulatory compliance

PROFESSIONAL EXPERIENCE

Data & Analytics Engineer | Servus Municipal Finance Analytics Remote | June 2024 – Present

- Serve as primary technical delivery contact for municipal government clients (Portland, Chicago, Seattle), owning end-to-end solutions from source-system ingestion through pipelines, curated models, dashboards, and production AI applications, and translating loosely defined questions from city officials and executive leadership into production systems
- Build and maintain data warehousing pipelines that extract, ingest, validate, and transform data from multiple source systems into Google BigQuery, processing 100M+ rows per client with automated data quality checks
- Architected a multi-city data warehouse unifying 180M+ records across nine U.S. cities into standardized dimensional schemas with census enrichment, enabling cross-jurisdiction comparative analysis
- Architect dimensional models and semantic layers (BigQuery, LookML) translating complex operational, financial, and demographic data into accurate reporting for technical and non-technical stakeholders
- Built a custom React + Recharts analytics application over BigQuery, delivering client-specific dashboard requirements in-house and giving clients full ownership of the presentation layer
- Developed and deployed AI-powered conversational analytics applications on GCP Cloud Run, enabling natural-language querying of curated data models, backed by a library of 120+ validated query templates
- Rebuilt a citywide parking revenue model to independently verify a colleague’s output, achieving near-perfect row-level parity and surfacing \$59M+ in recoverable revenue visibility
- Designed an analytical model merging randomized controlled trial assignments with billing and payment records to evaluate a utility discount program’s effectiveness for policy stakeholders
- Work extensively with sensitive, person-level financial and demographic data (payments, income qualification, equity analysis) under government data-handling and privacy requirements
- Author technical documentation (data dictionaries, transformation logic, data lineage, business rules) and coach a team of 5 university capstone analysts on data architecture and systems design

Research Data Analyst | USF Big Data Analytics Lab (Prof. Loni Hagen) Tampa, FL | January 2023 – December 2025

- Built end-to-end ML/NLP pipelines for large-scale text analysis: collection, preprocessing, feature engineering, model training, and evaluation
- Trained and fine-tuned machine learning models (BERT, Logistic Regression, Gradient Boosting, Random Forest) achieving 88%+ classification accuracy on stance detection tasks
- Co-authored peer-reviewed publication at the 38th International FLAIRS Conference (SCOPUS-indexed), contributing pipeline development and analysis methodology

Department Manager, Staff-Level (2017–2023) | Costco Wholesale Tampa, FL | 2011 – 2023

- Led teams of 15–25 in a high-volume operation; built operational KPI dashboards and reporting in Excel and Power BI from 2017 onward, tracking sales, inventory, labor productivity, and regulatory compliance

SELECT PROJECTS

- Multi-City Data Warehouse & BI Platform:** Built ETL pipelines integrating violation data across nine U.S. cities into a unified BigQuery warehouse with standardized dimensional schemas and a custom React analytics frontend built to client-specific requirements
- AI Conversational Analytics Agents:** Developed and deployed two production chatbot applications (Python/JavaScript, GCP Cloud Run) enabling natural-language queries against curated municipal data models
- AI-Generated vs. Real Image Detection:** Built a Swin + ViT vision-transformer ensemble (PyTorch) distinguishing AI-generated from authentic images across 152K images, achieving 0.987 macro-F1 against CLIP zero-shot, linear-probe, and single-model baselines
- NLP Stance Detection System:** Built ML pipeline processing 10,000+ unstructured social media records through multi-model classification, resulting in peer-reviewed publication

EDUCATION

Master of Science, Data Intelligence | University of South Florida Expected Spring 2027 | GPA: 4.0

B.S., Information Science (Data Science Concentration) | University of South Florida December 2025 | GPA: 4.0

Relevant Coursework: Data Warehousing, Database Design, Applied Data Intelligence, Statistical Learning, Deep Learning, Computer Vision, Optimization
