

CHRISTOPHER REDDISH

Business Intelligence & Analytics Development • Analytics Data Modeling • Data Warehousing • AI-Enabled Reporting

Riverview, FL | ChristopherReddish@USF.edu | (813) 362-8252 | [linkedin.com/in/christopher-reddish-192a402a5](https://www.linkedin.com/in/christopher-reddish-192a402a5) | github.com/Cred1747

Business intelligence and analytics developer with 8+ years of hands-on data reporting and analytics experience spanning operational BI, academic research, and production analytics engineering. Designs and delivers end-to-end analytics solutions: curated data models, data warehousing pipelines, and interactive reports and dashboards serving technical and non-technical stakeholders. Specializes in analytics data modeling for regulated, person-level operational and financial data, where accuracy directly affects individuals. Combines advanced SQL and cloud BI platform expertise with 14 years of operations leadership, team coaching, and a proven record of turning complex data requests into trusted, usable reporting. Published researcher completing a Master's in Data Intelligence (4.0 GPA).

TECHNICAL SKILLS

BI & Analytics	Looker (LookML semantic modeling, dashboards, reports), Power BI (dashboards, KPI reporting), Excel (advanced), data storytelling, KPI development, self-service analytics enablement
Data Modeling	Analytics data modeling, dimensional modeling (star schema, fact/dimension design), curated data models, data warehousing concepts, semantic layers, data architecture
SQL & Databases	Advanced SQL (CTEs, window functions, query optimization), Google BigQuery, SQL Server, database design
Data Engineering	ETL/ELT pipeline development, data extraction, ingestion/transformation/validation, data quality assurance, automated validation, data dictionaries, data lineage, data governance
Cloud & DevOps	Google Cloud Platform (BigQuery, Cloud Storage, Cloud Run), containerized deployment, Git/GitHub, CI/CD workflows
AI & ML	Conversational AI / natural-language analytics agents, NLP (BERT, sentence transformers), PyTorch, scikit-learn, predictive modeling
Languages	SQL, Python, LookML, JavaScript, R, DAX (working knowledge), HTML/CSS
Professional	Stakeholder requirements gathering, coaching and mentoring junior analysts, technical documentation, Agile/Scrum, cross-functional collaboration, regulatory compliance

PROFESSIONAL EXPERIENCE

Data Analyst & Analytics Engineer Servus Municipal Finance Analytics	Remote June 2024 – Present
- Design and develop BI and analytics solutions end to end, including curated analytics data models, reports, and interactive dashboards, supporting strategic initiatives and day-to-day operations for municipal government clients (Portland, Chicago, Seattle) - Build and maintain data warehousing pipelines that extract, ingest, validate, and transform data from multiple source systems into Google BigQuery, processing 100M+ rows across clients with automated data quality checks - Architect dimensional data models and semantic layers (LookML) that translate complex operational, financial, and demographic data into accurate, usable reporting for technical and non-technical stakeholders - Handle complex, ad hoc data requests from city officials, policy teams, and executive leadership, translating loosely defined business questions into production analytical models and dashboards - Rebuilt a citywide parking revenue analytics model to independently reproduce and verify a colleague's output, achieving near-perfect row-level parity and surfacing \$59M+ in additional recoverable revenue visibility - Developed and deployed AI-powered conversational analytics applications on GCP Cloud Run, enabling natural-language querying of curated data models, backed by a library of 120+ validated "golden queries" - Designed analytical data model merging randomized controlled trial assignments with billing and payment records to evaluate a utility discount program's effectiveness for policy stakeholders - Work extensively with sensitive, person-level financial and demographic data (payments, income qualification, equity analysis) under government data-handling and privacy requirements - Author comprehensive technical documentation: data dictionaries, field definitions, transformation logic, data lineage, and business rules supporting end users and future developers - Coach and mentor a team of 5 university capstone analysts, provisioning database environments, reviewing analytical deliverables, and guiding data architecture and systems design decisions	
Research Data Analyst USF Big Data Analytics Lab (Prof. Loni Hagen)	Tampa, FL January 2023 – December 2025
- Built end-to-end ML/NLP data pipelines for large-scale text analysis: data collection, preprocessing, feature engineering, model training, and evaluation - Trained and fine-tuned machine learning models (BERT, Logistic Regression, Gradient Boosting, Random Forest) achieving 88%+ classification accuracy on stance detection tasks - Co-authored peer-reviewed publication at the 38th International FLAIRS Conference (SCOPUS-indexed), contributing pipeline development and analysis methodology	

- Built operational dashboards and reporting in Excel and Power BI from 2017 onward, tracking KPIs across sales, inventory, labor productivity, and regulatory compliance
- Led teams of 15–25 employees; coached and developed staff through training, performance management, and structured mentoring, fostering positive team dynamics in a high-volume operation
- Managed compliance with USDA regulatory documentation requirements, building disciplined habits around auditable, high-accuracy record keeping
- Drove digital process improvements, transitioning paper-based tracking to electronic data workflows and improving reporting accuracy and operational efficiency

SELECT PROJECTS

- **Multi-City Data Warehouse & BI Platform:** Built ETL pipelines integrating parking violation data across nine U.S. cities into a unified BigQuery warehouse with standardized dimensional schemas and interactive Looker dashboards
- **AI Conversational Analytics Agents:** Developed and deployed two production chatbot applications (Python/JavaScript, GCP Cloud Run) enabling natural-language queries against curated municipal data models
- **Deep Learning Image Classification:** Built a multi-label CNN (PyTorch, ResNet-18) for vehicle damage classification, outperforming CLIP zero-shot and dense-network baselines (macro-F1 0.633)
- **NLP Stance Detection System:** Built ML pipeline processing 10,000+ unstructured social media records through multi-model classification, resulting in peer-reviewed publication

EDUCATION

Master of Science, Data Intelligence | University of South FloridaExpected Spring 2027 | GPA: 4.0

B.S., Information Science (Data Science Concentration) | University of South FloridaDecember 2025 | GPA: 4.0

Relevant Coursework: Data Warehousing, Database Design, Applied Data Intelligence, Statistical Learning, Predictive Analytics, Intro to AI, Deep Learning

PUBLICATION

Hagen, L., Hagen, A., Tafmizi, D., Reddish, C., Fox, A., Li, L., & DePaula, N. (2025). Human and AI Alignment on Stance Detection. 38th International FLAIRS Conference. (Peer-reviewed, SCOPUS-indexed)
