

CHRISTOPHER REDDISH

Data Analytics • Software Development • Cloud Engineering • Business Intelligence • AI & Machine Learning
Riverview, FL | ChristopherReddish@USF.edu | (813) 362-8252 | [linkedin.com/in/christopher-reddish-192a402a5](https://www.linkedin.com/in/christopher-reddish-192a402a5) | github.com/Cred1747

Data & technology professional with hands-on experience across the full analytics stack—from building ETL pipelines and cloud-deployed applications to designing BI dashboards and training machine learning models. Combines strong technical skills in SQL, Python, JavaScript, and cloud platforms with 14 years of operations leadership and a track record of translating complex data into business value. Published researcher pursuing a Master's in Data Intelligence with a 4.0 GPA.

TECHNICAL SKILLS

Languages	Python, SQL, JavaScript, R, HTML/CSS, LookML
Databases & SQL	Google BigQuery, SQL Server, advanced SQL (CTEs, window functions, optimization), database design, dimensional modeling
Cloud & DevOps	Google Cloud Platform (BigQuery, Cloud Storage, Cloud Run), containerized application deployment, Git/GitHub, CI/CD workflows
BI & Visualization	Looker (LookML semantic modeling, dashboards, reports), Power BI, Excel (advanced), data storytelling, KPI development
AI & ML	NLP (BERT, sentence transformers), scikit-learn, PyTorch, predictive modeling, conversational AI agent development
Data Engineering	ETL/ELT pipeline development, data ingestion/transformation/validation, data quality assurance, data dictionaries, data governance
Professional	Agile/Scrum, stakeholder communication, cross-functional collaboration, project management, technical documentation, team leadership

PROFESSIONAL EXPERIENCE

Data Analyst & Analytics Engineer | [Servus Municipal Finance Analytics](#)

Remote | June 2024 – Present

- Design and maintain ETL pipelines that ingest, validate, transform, and load data from multiple source systems into Google BigQuery, processing datasets of 100M+ rows across multiple clients
- Develop SQL-based analytics solutions using advanced query techniques (CTEs, window functions, aggregations) to consolidate structured and unstructured data into production-ready analytical models
- Build interactive BI dashboards in Looker with LookML semantic modeling, delivering operational KPIs and performance metrics to technical and non-technical stakeholders
- Develop and deploy AI-powered conversational analytics applications on Google Cloud Platform (Cloud Run), enabling natural language querying of complex datasets using Python and JavaScript
- Author comprehensive data dictionaries and technical documentation covering field definitions, transformation logic, data lineage, and business rules for enterprise datasets
- Identify and resolve data quality issues including source system inconsistencies, null propagation, and mapping errors, implementing automated validation checks across pipelines
- Collaborate cross-functionally with city officials, policy teams, and executive leadership across Portland, Chicago, and Seattle to translate business requirements into technical solutions
- Mentor a team of 5 NYU capstone students, provisioning database environments, reviewing analytical deliverables, and guiding them through data architecture and systems design

Research Data Analyst | [USF Big Data Analytics Lab \(Prof. Loni Hagen\)](#)

Tampa, FL | January 2023 – Present

- Build end-to-end ML/NLP data pipelines for large-scale text analysis, including data collection, preprocessing, feature engineering, model training, and evaluation
- Train and fine-tune machine learning models (BERT, Logistic Regression, Gradient Boosting, Random Forest) achieving 88%+ classification accuracy on stance detection tasks
- Co-authored peer-reviewed publication at 38th International FLAIRS Conference (SCOPUS-indexed), contributing data pipeline development and analysis methodology

Department Manager (Staff-Level) | [Costco Wholesale](#)

Tampa, FL | 2009 – 2023

- Managed operational analytics using Power BI and Excel, building dashboards and reports tracking KPIs across sales, inventory, labor productivity, and regulatory compliance
- Led digital process improvements including transitioning paper-based tracking systems to electronic data workflows, improving reporting accuracy and operational efficiency
- Managed teams of 15–25 employees, overseeing workforce scheduling, training, performance management, and compliance with USDA regulatory documentation requirements

SELECT PROJECTS

- **AI Conversational Analytics Agents:** Developed and deployed two production chatbot applications on GCP Cloud Run using Python and JavaScript, enabling natural language queries against complex municipal datasets for Chicago and Portland.
- **Multi-City Data Integration Platform:** Built ETL pipelines integrating parking violation data across nine U.S. cities into a unified BigQuery warehouse with standardized schemas and interactive Looker dashboards.
- **Smart Discount RCT Analysis:** Designed analytical data model merging randomized controlled trial assignments with billing and payment records to evaluate program effectiveness with data-driven visualizations for policy stakeholders.
- **NLP Stance Detection System:** Built ML pipeline processing 10,000+ unstructured social media records through multi-model classification (BERT, ensemble methods), resulting in peer-reviewed publication.

EDUCATION

Master of Science, Data Intelligence | University of South Florida | Expected Spring 2027 | GPA: 4.0
Bachelor of Science, Information Science (Data Science Concentration) | USF | 2025 | GPA: 4.0
Coursework: Database Design, Data Warehousing, Applied Data Intelligence, Object-Oriented Programming, Statistical Learning, Predictive Analytics
